Michael Thaler Primary Examiner Art Unit: 3731 Continuation of 3. Applicant's reply has overcome the following rejection(s): claims 1-4, 7-10, 13 and 16 under 35 USC 112, 1st paragraph, as failing to comply with the written description requirement and claim 3 under 35USC 112, 2nd paragraph.

Art Unit: 3731

As to the rejection under 35 U.S.C. 112, first paragraph, the portion of sleeve 4 which is external to the patient's abdominal wall 3 is pulled radially outwardly since it is wrapped around ring 6 and thus pulled by it as seen in figure 2. Thus, it is not seen how a self-sealing valve such as the self-sealing valve shown at 18 in figures 1, 3 and 4 could function in the area external to the patient's abdominal wall 3 since it would be pulled radially outwardly by its connection to rings 6 and 5 and thus always be open. The bottom of the self-sealing valve 18 which is within body cavity 2 (internal of the patient's abdominal wall 3) is not pulled radially outwardly by any structure and thus it is clear how it can remain closed until an object is forced through it.

As to the rejection based upon Bonadio, it is clear that pulling proximal ring 44 upwardly would pull the sleeve (the sleeve which passes within the incision) and bands 55 upwardly, causing the bands 55 to first abut the inner wall of the patient's cavity and then to pull the inner wall, along with the incision, upwardly, thus meeting the phrase "the cause the sleeve to apply outward pressure against the patient's body to retract the incision" in claim 1. The proximal ring 44 is inherently capable of being manually grasped by a surgeon and
